

Chuck Morse

Information Technology Specialist

Chuck Morse is an Information Technology Consultant specializing in the study of Computer Crime and examining Forensic Digital Evidence. He currently provides a wide range of technical support and services to multiple police agencies, law firms and private companies with small to medium sized networks.

While studying Computer Science and Criminal Law and Investigations at Kentucky State University, Chuck's IT career began while working computer hardware support and software development jobs during summer breaks. His first and second college year summer internships involved business critical database development with an Indiana pharmaceutical company. He was responsible for building databases used for biochemical testing and laboratory validation of a well-known blockbuster drug product. His third and fourth college year summer breaks lead to a summer job with a government computer agency working as a junior analyst in the mainframe data operations division.

In 1992, he accepted a full time position with the government as a systems analyst. After graduation while working with local, state and federal criminal justice agencies, the analyst position confirmed the growing need for technology specialist in the field of public safety.

After many years of working as a government contractor, Chuck received a National Criminal Justice Computer Forensics Certification. As a member of organizations designed to protect our nation's infrastructure, he's joined some of the top Computer Crime Investigators in the fight against cyber crimes.
